

**Daisy's Eye Cancer Fund**  
A Global Response To Childhood Retinoblastoma

**- All In A Scramble -**

Retinoblastoma is an eye cancer which affects young children. The earliest sign is a white glow in the eye, like a cat's eye. The cancer is very curable when children are diagnosed early and given specialised care. Unfortunately, many children still lose an eye. When children are not diagnosed early enough, or can't access the special care they need, the cancer will spread outside the eye, which is usually fatal.

Use the booklet "an introduction to Retinoblastoma" to help unscramble the medical words below. The first letter is provided for you, and the clues will help you to find what you are looking for.

P \_\_\_\_\_ a picture can be the key to early diagnosis.

P O O H T R A H G

L \_\_\_\_\_ is revealed in a flash of light.
